**STEPS TO BE TAKEN FOR THE CORRECT INSTALLATION
AND PROPER PERFORMANCE OF VOSGES SUPER
CATALYZER BABY GAS ON ATMOSPHERIC BOILERS**

**NEW FUNCTIONALITY WITH THE APPLICATION OF
MAGNETIC CATALYZER SUPER CATALYZER**

FUEL: GAS METHANE

1. Before the installation of **Super Catalyzer**, make an analysis smokes and to check the boiler consumption.
2. Check of the pilot flame height or of the fire point of the kitchen.
3. To install the Vosges **Super Catalyzer** on the gas ramp of the boiler, near the same one.
4. After having checked that the height of the flame is increased with the installation of the **Super Catalyzer**, to bring it in the preceding situation, reduce inside the boiler, on the valve solenoid, 20% around of gas.
5. At the end of the operations, make again the analysis smokes and to check the gas consumption.
