COFFEE MACHINES

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- Crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause for the reduction of flowing water in the pipes;
- consequently it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA we obtain:

- ✓ elimination of all the previous incrustations in the tubes and the recycling systems, preventing the reformation;
- ✓ longer duration of the equipments, the tubes and the nozzles;
- ✓ reduction of the maintenance of the systems, with consequent incalculable economies;
- ✓ elimination of chemical descaling, but also aggressive and polluting;
- ✓ elimination the use of chemistry and the relevant costs;
- ✓ elimination of the sour taste of the coffee for machine maintenance;
- ✓ elimination of the equipment for the treatment for the water;
- ✓ shorter time in water heating;
- ✓ reduction of consumption of the electric power;
- ✓ safeguard of the environment.
